

The Dugard Academy 446 Multi-Function Teach Lathe

DUGARD 446 ACADEMY

The first in an exciting new line of teach machines being launched by Dugard. It's the perfect solution for small companies working on small batch production as well as schools and colleges, and prison workshops as it's extremely versatile with a very competitive price.

The Academy 446 Multi-Function Teach Lathe is a highly capable small machine. It's designed to provide outstanding accuracy and reliability time after time, giving the customer everything they need. It features:

- Industry standard Siemens 828D CNC control system with Shop Turn "conversational" programming – this makes it easier to programme parts directly from the machine as it has 10.4" high resolution screen to visually display the part, giving you the option for offline programming.
- Two large hand wheels making it possible to use the machine as a manual lathe – useful for making one off parts. Shop Turn is also utilised in the manual mode

as it can record the operator inputs, making it quick and easy to reproduce small batches.

- Robust and versatile gap bed construction with an optional 8 station hydraulic turret.

ASA D1-6 type Camlock spindle nose for quick release chuck removal. All Meehanite casting for main components

Manual tool post as standard. Optional hydraulic turret with 8 position 20mm tooling

The tailstock is designed to support the work piece with no interference

The Academy range also includes the Dugard manual lathes and mills, again ideal for the training environment. These include standard lathes, mills and a radial drill and are perfect starter machines.
